

Memory Card Game

CAT -1 ASSIGNMENT TEST

Name: Sundareswaran Rajaguru

Register Number: 3122247001048

1. Overview

A browser-based Memory Card Game built with plain HTML, CSS, and JavaScript - no frameworks or libraries. It renders a 4x4 grid of 16 face-down cards, each hiding one of 8 number text contents (each appears twice). The player clicks two cards at a time to find matching pairs. Matched pairs stay revealed in green; mismatched pairs flip back after a short delay.

Memory Match Game

	Mango		
		Guava	
Grapes		Mango	
Guava	Grapes		

2. Technology Stack

- HTML5
- CSS
- JavaScript

3. Folder Structure

WAD_test/
├── index.html - Game markup, links CSS and JS
├── style.css - Layout, colors, card styling
└── script.js - Game logic (shuffle, click, match check)

4. Features Implemented

- 16 cards (8 matching pairs)
- 4 × 4 grid layout
- Cards are initially face down
- Random card shuffle at the beginning
- Only two cards can be selected at a time
- Matching cards remain face up
- Non-matching cards flip back after 1 second
- Winning message displayed after all pairs are matched
- Game automatically restarts after completion

5. Styling Summary

- Cards have a **gray background** by default.
- CSS Grid is used to arrange the cards in a **4 × 4 layout**.
- Flexbox centers the text content inside each card.
- Each card has a fixed size of **100px × 100px**.
- Font size is **20px** for clear text visibility.
- Pointer cursor indicates that the cards are clickable.
- A **green background with white text** is applied to matched cards.
- Equal spacing (**10px gap**) is maintained between cards.
- The page uses the **Arial** font with centered text for a clean appearance.

6. How to Run

1. Keep index.html, style.css, and script.js in the same folder.
2. Open index.html in any web browser.
3. Click cards to reveal them and match all 8 pairs.
